

# Norway (Red) Pine

The Norway (Red) Pine prefers full sun and is shade-intolerant. It does best with well-drained, dry soil.

It is a slow-growing tree with a mature height of 60 to 80 feet.

It is the Minnesota state tree and popular for planting because of its resistance to disease and insects. White-tailed deer browse on saplings and young trees, rabbits feed on seedlings and squirrels, chipmunks, mice and birds feed on the seeds.
